Air filtration in highest variety

For more than 105 years, the branch DELBAG® Air Filtration, today a part of DencoHappel GmbH, is specialized in air filtration business and is one of the leading companies in filtration and dust removal. Activities at DELBAG® accordingly include not only production, but also research and development. Numerous patents and valuable laboratory findings are proof of the top technological level of our products and the extraordinary commitment and qualification of our employees. The collaboration in several professional committees shows our power for innovation. Through constant material development and investments into production and laboratory facilities, we guarantee a constant improvement of product quality and production productivity. The scope of DELBAG® supplies and services ranges from individual components of air filters to complete, turnkey plants, and from project engineering to commissioning. The excellent reputation of our company is our customers' guarantee for top-level technology, quality assurance, processing, highly professional consulting, and reliable service. We offer individual solutions to you for your applications within the range of air purification and air treatment. **Corporate philosophy:** The provision of future oriented air filter products optimized for ecology, cost effectiveness and minimum energy consumption. **Profile of activities:** Filter media and -units, complete filter installations and systems. Proven series products for supply and exhaust-air filtration, customized solutions.

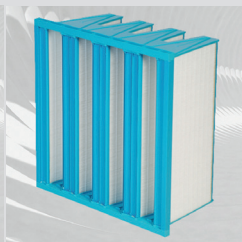

Custom-made and efficient air purification

DELBAG® Air Filtration offers for each project out of the full scope of engineering possibilities a tailor-made solution for various applications.

- Proven standard – and special filter for HVAC and industry customers as well as specialized companies concentrating on the facility management of office buildings, airports and others, specifically also in the life science and automotive industry.
- Reliable engineering for systems and plants for the filtration of dust, aerosols, and gaseous substances from processes and for workplace and environment protection.
- Comprehensive range of air intake systems existing of pulse filters, static filters, inertia separators to rotary oil bath filters for gas turbines, compressors, engines and process air.
- DELBAG® Air Filtration stands for economical and high energy efficient products, characterized by high separation, low differential pressures and high dust holding capacity.
- The processes of our company are certified according to DIN EN ISO 9001 and 14001. Our products, too, are tested, labelled and documented acc. to EN 779 and EN 1822 and comply with the hygienic requirements of VDI-6022. Our fine dust filters M5-M6 and F7-F9 are additionally EUROVENT certified.

Core competencies

- Bag Filters and Filter Pads
- Filter Elements and AMC filters
- HEPA- and High Temperature Filters
- Clean Room components and Filter Housings
- Special filter type LoTex® und FireTex®
- Electrostatic Precipitators
- Dust and Aerosol Separators
- Dry Dust Collectors
- Air Intake Systems
- Suction and Air Filter Systems
- Central and Decentral Systems
